

Intensive Training in Cooperative Learning

August 24 to 26, 2009

This brain compatible cooperative learning workshop includes an in-depth look at the five basic elements of cooperative learning and why they are essential in the cooperative (and brain compatible) classroom.

5 Basic Elements of Cooperative Learning

- Positive interdependence
- Individual and group accountability
- Group processing
- Social and interpersonal skills
- Face-to-face interaction

This interactive three-day workshop will introduce cooperative learning and brain compatible structures for use in the junior, middle and upper school classrooms. Teachers will prepare their own cooperative lesson as well as participate in lesson design to extend their understanding of cooperative structures.

The three-day session is led by Seonaid Davis, an educational consultant with extensive experience in developing, presenting and facilitating cooperative learning. She has received rave reviews for her work with local and international schools. Teachers will leave the workshop prepared to walk into their next class and use brain compatible and cooperative learning structures and strategies.
